INNOBYTE PROFESSIONAL MAGENTO AUDIT

innobyte
serious web development

Your website's professional diagnosis!

1. Why do I need an Audit?

a) My site is in trouble

A Magento store is not easy to manage. Odds are that you've run into several problems so far (bugs, poor performance or stability issues). On your list, you might have:

- System crashes under heavy load
- Code architecture violations
- Upgrade malfunction
- Difficulty implementing new features
- High maintenance cost

b) I want to improve performance

You are not satisfied with the loading time of pages, or how your shopping cart works. Don't worry, our leading analysts will perform a full website audit.

Our Magento Audit service offers:

- Analysis of your Magento store and feedback as to its build quality, speed and security
- Solutions and ideas that will help improve your website's performance
- Further development advices regarding the right Magento Edition, hosting and support packages

c) I want to check how well my site was built

Your business depends on the quality of your website's code. If you're not sure about the work your development team has put in, let us test it!

We will check:

- Security vulnerabilities
- Conflicts between competing extensions
- Code viability – your programmer might have overwritten core files, when building new functionalities
- Upgrade possibilities

2. This audit is great for:

Store Owners

- Easily check the **quality** of your developers' work;
- Identify problems before they cause disruption, **before making you to loose money**;
- Make sure that your site is working at **top performance**;
- Save **money** with further misleading developments.

Technical Executives

- Verify that your development conforms with accepted **Magento best practices;**
- Quickly evaluate the state of existing sites before estimating on new work;
- Demonstrate quality to your clients through an independent assessment.

3. What can we do for you,
more precisely?

To facilitate in-depth assessment, **we start by creating a testing environment in our hosting environment**. We scrutinize the three critical components that have the strongest impact on Magento's system stability—**Architecture, Code Quality, and Performance**—and process the raw results. Here's how we will proceed:

Basic Settings Review and Correction
Recommendations for Magento admin settings
Setup optimization
Core element configuration

Magento Module Review
Third-party module report (app/code/local and app/code/community)
Broken/corrupted module report
Plan of action for bad modules

Speed Tweaks
File combination
Identification of potential bottle necks & removal strategy
Web server settings optimization tips
Magento cache optimization tips

Magento Core Health Review
Magento Core code base report
Broken/corrupted Magento code report
Scan of entire Magento code base, alerting you to potentially dangerous files
Plan of action if core is compromised

4. Result: The Audit Report

Innobyte's Certified Magento Developers will run an efficient audit of your Magento site to check it for **misconfigurations and errors**. We will then give you a detailed results **report** and provide advice on how to resolve any errors and give you practical recommendations for **optimizing** your Magento installation.

Your report will have 3 sections:

➢ **Overall site health status** -> Certified Developer's Executive Summary

➢ **Encountered problems** -> Suggested Solutions -> Time & Cost estimates

➢ **Performance improvement ideas** -> Benefits -> Time & Cost estimates

5. Why should you do your audit with INNOBYTE?
